

## The Celebrity

The Celebrity handles well. The takeoff is short, even when it's loaded with fuel and passenger. The normal takeoff will vary with your choice of engine, but the prototype with 65 horsepower gets off the ground in 300 feet. The latest factory demo gets off the ground in about 250 feet using a C-90-100 horsepower. On a warm day, when density altitude can reach the 2,500 foot range, you can still have a short takeoff roll and an excellent rate of climb.

## If you like the thrill of open cockpit flying, you'll enjoy flying the Celebrity.

The control inputs are light, and response is immediate. The Celebrity has great handling qualities; it's known for its control and harmony. This is a special plane for the pilot who appreciates the low and slow joy of flying.

Specifications	
Wingspan	22'
Wing Area	176 sq. ft.
Wing Gap	38"
Aileron Area	20 sq. ft.
Length	17'6"
Height	6'
Tail Span	7'
Engine HP	65-125 hp
Seats	2/Tandem dual controls
Design Loads	+4 -2.5g
Gross Weight	1,230 lbs
Empty Weight	600 lbs
Fuel Capacity	13 gallons
Field Assembly Time	30 min

Flight Performance	
Velocity-Never Exceed	120 mph
Top Level Speed	95 mph
Cruise Speed	80-85 mph
Stall Speed	40 mph
Climb Rate	800-900 fpm
Take-off Run	300'
Landing Roll	300'
