

The Youngster

This airplane offers you four-cycle dependability with the pleasure of flying a light, agile performer. The Youngster flies on the time proven 2315 airfoil with stainless wires and a bubble canopy. Enjoy the freedom of an open cockpit on warm summer days, and the warmth of a fully enclosed cockpit for comfortable flying in the winter.

Experience the nostalgic beauty of the Youngster.

Courtesy of Scott Todd

It was designed to be affordable, but with the high quality you've come to know of Fisher Flying Products. The Youngster is gentle on the ground, but allows you to play with it in the air. The Youngster employs all wood construction using a Warner truss frame with 1/8" birch ply skins making the lightest, strongest fuselage available. Stringers are carefully placed along the fuselage sides and top turtle deck to form the attractive fabric shaped fuselage.

Specifications	
Wingspan	18'
Wing Area	126 sq. ft.
Cord	42"
Wing Loading	5 lbs.
Length	15'6"
Height	6'1"
Tail Span	84"
Fuselage Width	24"
Headroom	39"
Gross Weight	650 lbs.
Empty Weight	400 lbs.
Construction Time	500 hrs

Flight Performance		
	65HP VW	50 HP Rotax
Velocity-Never Exceed	110 mph	110 mph
Cruise Speed	80-90 mph	80 mph
Stall Speed	32-35 mph	32 mph
Climb Rate	700 fpm	800 fpm
Take-off Run	200'	200'
Landing Roll	250'	250'
